

# Railway Civil Engineers' Association

Promoting the benefits  
which railway civil engineers  
can bring to our world with  
a fast, comfortable, safe  
and sustainable means of  
transport.

## Who are we?

The **RCEA** was founded in 1921 and exists to encourage the exchange of knowledge and experience between railway civil engineers and encourage continuing professional development

Following the privatisation of British Railways and to keep up with the changing needs of engineers, in 1997 the **RCEA** became an Associated Society of the Institution of Civil Engineers.

## What we do

Sharing and advancing knowledge, the **RCEA** and its members seek to enhance people's lives through railway civil engineering.

We work closely with other engineering disciplines through the Railway Engineering Forum and Young Railway Professionals to develop coherent strategies for the UK rail network and to foster training and development of engineers at all levels.

## Membership

Our members are from the whole of the railway industry, both heavy and light rail, from client organisations, consultants, contractors and suppliers.

Your specific knowledge and experience will be valued and you will have the opportunity to share it with colleagues from elsewhere in the industry both at formal meetings and during informal discussions.

Membership is open to professional engineers in Great Britain and Ireland who hold positions with significant responsibility for the development, design, construction or maintenance of infrastructure for railway operations.

We also welcome younger members who have an enthusiasm and interest in railway civil engineering.

### Benefits of becoming a member

- A programme of presentations and meetings on current topics and issues
- The chance to meet colleagues from a variety of backgrounds with potential innovative solutions for your projects
- The opportunity to be a privileged visitor to projects in the UK and overseas
- Attendance at biennial Parliamentary reception
- Certificates to demonstrate Continuing Professional Development
- Opportunities to meet leading political and engineering figures in the transport industry
- Develop a broader understanding of rail integration and 21st Century transport needs

## Joining the RCEA

Apply directly online or download and complete a pdf application form. Please visit our website
